## Apple Trees

<u>Type</u>	<u>Zone</u>	<u>Description</u>
<i>Goodland</i>	3	One of the very best hardy apples. Flesh is firm and good for eating, cooking and storing. Flowers mid season and ripens late September Full size, 20ft x 20ft.
<i>Halared</i>	3	A firm, dark pink-red apple with a juicy, sweet-tart flavor Fireblight resistant. Heavy producer and a good keeper. Flowers late season and ripens late September Semi-Dwarf 12-15ft tall and wide.
<i>Honeycrisp</i>	4	An exciting, new apple that has become outstanding because of it's explosive crispness, flavor and storage life. Flowers mid season and ripens late September. Semi-Dwarf 12-15ft tall and wide.
<i>McIntosh</i>	4	An all time favorite after nearly 200 years. Crisp flesh, dark red peel. Especially good after the first autumn frost. Flowers mid season and ripens late September. Semi-Dwarf 12-15ft tall and wide
<i>Red Wealthy</i>	3	An improved strain of Wealthy with a white firm flesh. Flowers early-mid season and ripens mid September. Semi-Dwarf 12-15ft tall and wide
<i>Sweet Sixteen</i>	4	And excellent desert apple with a sweet and unusual flavor. Medium red striped fruit with crisp, juicy texture. Fireblight resistant. Flowers mid season and ripens mid-late September Semi-Dwarf 12-15ft tall and wide

### \* Pollination of Apple Trees\*

Use two varieties from the same or similar flowering times

**Early:** Hazen, Norland, Red Wealthy, State Fair, Whitney, Yellow Transparent

**Mid:** Goodland, Honeycrisp, Honeygold, McIntosh, Red Barron, Sweet Sixteen

**Late:** Delicious, Halared, Haralson, Red Regent

## Cherry Trees

<i>Evan's Bali</i>	3	Selected for good bud hardiness. Large red 1" fruit, is one of the sweetest sour cherries, which is good for fresh eating or baking. Flowers early May and ripens in August. Grows to a height of 15-20ft. Self pollinating.
<i>Montmorency</i>	4	A vigorous grower producing large, tart red fruit. Fruit is firm and juicy. Good in pies or for preserves. Flowers early May and ripens late June. Grows to 12-18ft tall and wide. Self pollinating.

## Pear Trees

- Luscious* 4 Juicy, sweet bright yellow fruit. Excellent eating and in desserts with red color. Flowers early May and ripens late September and is Fireblight resistant. Pollen-sterile, cannot be used to pollinate a second pear tree, suggest using Parker. Semi-Dwarf to a height of 15-20ft tall
- Parker* 4 A large, fine grained, tender fruit, yellow to bronze in color. Flowers early May and ripens in August. Vigorous, Semi-Dwarf upright grower to 10-15ft tall. Needs Pollinator and is a good pollinator for Luscious.
- Summercrisp* 3 One of the hardiest pears that is free from Fireblight. Fruit harvest in mid August. Crisp and green with a red blush. Stores for up to 2 months. Flowers End of May. Reaches a height of 15-25ft tall. Needs a pollinator, we suggest Parker.

## Plum Trees

- American* 3 White flowers bear golden purple fruit that is used for jams and jellies. Drought tolerant tree that grows in tree form or thickets. Flowers in March/April and ripens in late June/July. Reaches a height of 10-15ft tall. Self pollinating
- Mount Royal* 4 Blue European plum, which is good eaten right off the tree or for desserts, jams and preserves. Tender, juicy flesh. Flowers early May and ripens late August. Reaches a height of 8-12ft tall. Self pollinating.
- Toka* 3 Red, medium sized, richly flavored variety with beautiful apricot color. Flowers late April and ripens mid August. Reaches a height of 10-15ft tall. Requires a pollinator.

### Size

10 Gallon  
6-7ft Well Branched Tree  
Should produce fruit in 1st or 2nd year

### Ball & Burlap

8ft + Well Branched Tree  
Instant fruit producer  
Will produce in 1st year
